EXAMINER

MANTIS MERCADER, ELENI M

ART UNIT PAPER NUMBER

3737

DATE MAILED: 11/16/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/625,803

Applicant(s)

RABINER ET AL.

Examiner

Eleni Mantis Mercader

Art Unit

3737

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 20 August 2004.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 17-28 and 49-82 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 17-28 and 49-82 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8/20/2004 has been entered.

Response to Arguments

The newly added limitation to overcome the 102 rejection was addressed in the previous 103 rejections, and with respect to the 103 rejections the arguments presented are not persuasive. The Examiner respectfully disagrees with Applicant's arguments in that the current claims state nothing with respect to wavelength equations or longitudinal versus transverse waves. The claims refer to vibration. Anti-nodes or loops inherently cause transverse vibration or cavitation and since these multiple loops are located across the length of the probe, vibration or cavitation occurs at these locations along the length of the probe. Also, the Examiner disagrees with the arguments regarding Soble et al. '724 because this reference does teach an aspiration channel recessed along the length of an outer surface of the ultrasonic probe in the broadest reasonable interpretation of the claim language as a probe structure does not exclude lumens which can be used for aspiration and an aspiration channel could be a lumen used for aspiration. For at least the same reasons all double patenting rejections stand.

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or

Art Unit: 3737

improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 17-28, and 49-82 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-37 of U.S. Patent No. 6,524,251. Although the conflicting claims are not identical, they are not patentably distinct from each other because they represent obvious alternate variations and groupings of the patented claims, which include transverse vibration and aspiration means.

3. Claims 17-28, and 49-82 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-40 of U.S. Patent No. 6,660,013. Although the conflicting claims are not identical, they are not patentably distinct from each other because they represent obvious alternate variations and groupings of the patented claims, which include transverse vibration and aspiration.

4. Claims 17-28, and 49-82 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-37 of U.S. Patent No. 6,652,547. Although the conflicting claims are not identical, they are not patentably distinct from each other because they represent obvious alternate variations and groupings of the patented claims, which include transverse vibration and aspiration.

Art Unit: 3737

5. Claims 17-28, and 49-82 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-20 of U.S. Patent No. 6,679,873. Although the conflicting claims are not identical, they are not patentably distinct from each other because they represent obvious alternate variations and groupings of the patented claims, which include transverse vibration and aspiration.

6. Claims 17-28, and 49-82 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-28 of U.S. Patent No. 6,695,781 (note that this patent is not available for printing in WEST so please see application serial no. 09/917,471). Although the conflicting claims are not identical, they are not patentably distinct from each other because they represent obvious alternate variations and groupings of the patented claims, of which the claimed language includes the features of transverse vibration and aspiration means.

7. Claims 17-28, and 49-82 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-8, 11-13, 19-27, 30-32, 38-46, 49-51, 57-65, 68-70, and 76-77 of copending Application No. 10/071,953. Although the conflicting claims are not identical, they are not patentably distinct from each other because they represent obvious alternate variations and groupings of the presented claims in Application No. 10/071,953 including ultrasonic therapy via transverse vibration and an aspiration passage between the probe and the sheath.

Furthermore, it would have been obvious to one skilled in the art at the time that the invention was made to have utilized the apparatus and procedure at any desired area of interest for destruction and removal of the tissue of interest. Therefore, it would have been obvious to

Art Unit: 3737

one skilled in the art at the time that the invention was made to have emulsified and/or fragmented the tissue of interest such as destruction of cancer cells in the uterus.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

8. Claims 17-28, and 49-82 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-76 of copending Application No. 10/268,487. Although the conflicting claims are not identical, they are not patentably distinct from each other because they represent obvious alternate variations and groupings of the presented claims in Application No. 10/268,487 including ultrasonic therapy via transverse vibration and an aspiration channel.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

9. Claims 17-28, and 49-82 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 28-59 of copending Application No. 10/268,843. Although the conflicting claims are not identical, they are not patentably distinct from each other because they represent obvious alternate variations and groupings of the presented claims in Application No. 10/268,843 including ultrasonic therapy via transverse vibration and an aspiration channel.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

10. Claims 17-28, and 49-82 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-60 of copending

Art Unit: 3737

Application No. 10/371,781. Although the conflicting claims are not identical, they are not patentably distinct from each other because they represent obvious alternate variations and groupings of the presented claims in Application No. 10/371,781 including ultrasonic therapy via transverse vibration and an aspiration channel.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

11. Claims 17-28, and 49-82 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-23 of copending Application No. 10/373,134. Although the conflicting claims are not identical, they are not patentably distinct from each other because they represent obvious alternate variations and groupings of the presented claims in Application No. 10/373,134 including ultrasonic therapy via transverse vibration and having an aspiration channel.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

12. Claims 17-28, and 49-82 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-68 of copending Application No. 10/396,914 in view of Soble et al.'724. Although the conflicting claims are not identical, they are not patentably distinct from each other because they represent obvious alternate variations and groupings of the presented claims in Application No. 10/396,914 including ultrasonic therapy via transverse vibration. The claims of Application No. 10/396,914 do not expressly state the use of aspiration channels. In the same field of endeavor, Soble et al.'724 teach at least one aspiration channel recessed along the length of an outer surface of the

Art Unit: 3737

probe, wherein aspiration occurs through the at least one aspiration channel along the length of the probe (see col. 6, lines 9-27). It would have been obvious to one skilled in the art at the time that the invention was made to have modified the claims of Application No. 10/396,914 to incorporate channels for aspirating any fragments remaining in the treatment area.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

13. Claims 17-28, and 49-82 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-20 of copending Application No. 10/462,182. Although the conflicting claims are not identical, they are not patentably distinct from each other because they represent obvious alternate variations and groupings of the presented claims in Application No. 10/462,182 including ultrasonic therapy via transverse vibration and having an aspiration channel.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 103

14. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

15. Claims 17-28, and 49-82 are rejected under 35 U.S.C. 103(a) as being unpatentable over Soble et al.'724 in view Sakurai et al.'144.

Art Unit: 3737

Soble et al.'724 teach all the features of the instant invention including an ultrasonic treatment apparatus having:

A therapeutic probe for use as a lithotripsy including using an ultrasound probe having an ultrasonic tip, the ultrasonic probe including at least one channel on an outer surface of the ultrasonic probe, the at least one channel extending from the proximal end of the ultrasonic probe to a location adjacent the ultrasonic probe (see col. 1, lines 54-65; describing the use of ultrasound as a possible lithotripter and see col. 2, lines 48-52; describing use of a lithotripter through the probe). The ultrasonic probe includes an irrigation passage (see col. 2, lines 36-41). The sheath of the probe has multiple lumens (see col. 3, lines 18-29). The possible axial arrangement of the parts and their interconnections are depicted in Figures 3A-3C.

Soble et al.'724 teach a fiberoptic endoscope having channels for insertion of treating tools including a therapeutic lithotripter probe (see col. 2, lines 42-56).

Soble et al.'724 teach at least one aspiration channel recessed along the length of an outer surface of the probe, wherein aspiration occurs through the at least one aspiration channel along the length of the probe (see col. 6, lines 9-27).

Soble et al.'724 teach the use of a flexible endoscope and lithotripter as well as a flexible sheath (see col. 2, lines 42-56 and col. 5, lines 45-53).

Soble et al.'724 teach all the features of the instant invention including an ultrasonic treatment apparatus having:

A therapeutic probe for use as a lithotripsy including using an ultrasound probe having an ultrasonic tip, the ultrasonic probe including at least one channel on an outer surface of the ultrasonic probe, the at least one channel extending from the proximal end of the ultrasonic probe

to a location adjacent the ultrasonic probe (see col. 1, lines 54-65; describing the use of ultrasound as a possible lithotripter and see col. 2, lines 48-52; describing use of a lithotripter through the probe). The ultrasonic probe includes an irrigation passage (see col. 2, lines 36-41). The sheath of the probe has multiple lumens (see col. 3, lines 18-29). The possible axial arrangement of the parts and their interconnections are depicted in Figures 3A-3C.

Soble et al.'724 teach a fiberoptic endoscope having channels for insertion of treating tools including a therapeutic lithotripter probe (see col. 2, lines 42-56).

Soble et al.'724 teach at least one aspiration channel recessed along the length of an outer surface of the probe, wherein aspiration occurs through the at least one aspiration channel along the length of the probe (see col. 6, lines 9-27).

Soble et al.'724 teach the use of a flexible endoscope and lithotripter as well as a flexible sheath (see col. 2, lines 42-56 and col. 5, lines 45-53).

Soble et al.'724 do not expressly teach the probe supporting transverse ultrasonic vibration along at least a portion of the axial length of the probe and wherein the vibration of the probe provides a plurality of anti-nodes along at least a portion of the axial length.

In the same field of endeavor, Sakurai et al.'144 teach the probe supporting transverse ultrasonic vibration along at least a portion of the axial length of the probe and wherein the vibration of the probe provides a plurality of anti-nodes along at least a portion of the axial length (in Figure 13, see how the horn (element 63) transmits the vibrations to the ultrasonic probes (elements 61 or 62) with the transverse oscillation of the probe indicated in Figures 40 and 41 with indications of anti-node or loops wherein there is maximum oscillation along the length of the probes).

Art Unit: 3737

It would have been obvious to one skilled in the art at the time that the invention was made to have modified Soble et al.'724 in view of Sakurai et al.'144 and incorporated the specific teachings of Sakurai et al.'144 by using the specific probe as the probe of choice in lithotripsy by utilizing transverse vibration as this is such an ultrasonic device (see in col. 1, lines 12-16, describing use of device for breaking stones).

Conclusion

16. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eleni Mantis Mercader whose telephone number is 703 308-0899. The examiner can normally be reached on Mon. - Fri., 8:00 a.m.-6:30 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Casler can be reached on (703) 308-3552. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
